
ISO 14000 Certification Services

ISO 14001 has proven to be a useful tool to evolve from maintaining regulatory compliance to a position of improved productivity and enhanced competitive advantage. There is mounting evidence that companies which manage not only the standard economic factors but also the environmental and social factors affecting their business show financial performance superior to those which fail to manage all three.

About the standard

ISO 14001 is the International Organization for Standardization's (ISO) standard for Environmental Management Systems. In today's environmentally sensitive business arena, organizations face ever-increasing demands of environmental legislation as well as stakeholders and customers. The implementation of a formal Environmental Management System (EMS), based on ISO 14001 provides a mechanism for reducing both high business risks and financial costs associated with poor environmental control, and monitoring and controlling legal responsibilities and obligations.

Issues addressed by KPMG's Certification Process for ISO 14000 series standard

- Identification of significant environmental aspects of an organization's activities
- Management and improvement of its environmental performance
- Compliance with policies, operational controls and environmental legislation
- Management of resources and wastes.

Benefits of the Audit and Certification Process for ISO 14000 series standard

- Improved company image
- Reduced costs through increased efficiencies and reduction of waste
- Increased customer and stakeholder confidence through better defined policies and responses to environmental objectives
- Improved employee awareness and understanding of environmental issues.
